Sentinel's Expanded Network Operations Center Open for Business in May 2010!

Recognizing that the diverse nature of today's Local and Wide Area networks create support challenges for many organizations, Sentinel Technologies' recently expanded their Network Operations Center (NOC). Sentinel's NOC is the foundation for delivering services that ensure customer's networks remains highly available.

Ryan Santry, Sentinel's Support Services and Technology Development Manager stated "Within our NOC, we monitor the health of the network to ensure applications, links, network hardware, servers and bandwidth are performing as expected.

In addition, if network equipment performance becomes degraded, the data and alerts generated by network devices are routed to Sentinel's NOC where our 24/7 technical staff quickly detect, diagnose, and resolve network outages and performance issues".

Sentinel's full suite of Managed Services offerings address the support challenges encountered by IT professionals by providing specialized resources to support heterogeneous networks.

For more information about Sentinel's Network Operations Center or Suite of Managed Services, please contact the InfoSENter at 800-769-4343 or infosenter@sentinel.com
