

## ActiveRecovery™ Incident Response Readiness Workshop

According to multiple studies, breaches and ransomware have more than doubled in the past year. A recent report commissioned by Sophos interviewed 5,400 IT professionals at mid-sized organizations, where 37% discovered they had been impacted by ransomware and 54% confirmed that cybercriminals succeeded in encrypting their data at an average cost of \$1.85M. Is your business capable of defending itself and surviving a major attack?

### Workshop Overview

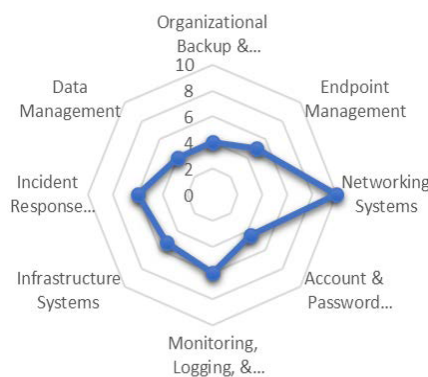

Fortis by Sentinel is proud to offer you our ActiveRecovery™ Incident Response Readiness Workshop, which focuses on eight critical areas to help determine how well your organization would handle a cyber attack. Our experienced Cyber Commanders engage with your team, deliver maturity ratings across key areas, and include practical recommendations to improve your ability to fight back and keep your systems secure.

According to Gartner, the defense lifecycle is a continuous process of **Preparation, Prevention, Detection and Mitigating Attacks**. When a ransomware attack is successful, the **Recovery and Root Cause Analysis** phases are triggered.

### Critical Areas Covered:

- Data Management
- Backup and Snapshot Recovery
- Endpoint Management
- Networking Security
- Account & Password management
- Monitoring Logging and Alerting
- Infrastructure Systems and Incident Response
- Incident Response

During the workshop, Fortis ActiveRecovery™ experts guide your team to identify business criticality, current level of maturity, desired level of maturity over time, and key inhibitors to success. Our experts detail common insurer requirements based on direct experience of being involved in claims with nearly every major cyber insurer. They will share field experiences with insurers and provide information on current trends in cyber insurance coverage.
